REPLY BRIEF

Sir:

Applicant respectfully files this Reply Brief in response to the Examiner's Answer mailed on March 22, 2004.

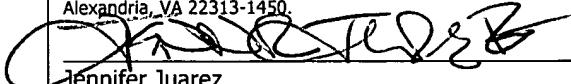

I. REPLY

With respect to claim 1, the Examiner asserts that Narurkar teaches automatically transferring time sensitive data from a first processor-based system to a second processor-based system. However, Narurkar is primarily directed to manipulation of data of a first format to a format used in a second system. There is no specific teaching in Narurkar that such data be time sensitive data to be automatically displayed on the second system.

The Padwick reference is merely a description of the Outlook email program and does not provide any teaching or suggestion with regard to interfacing with a second system.

Date of Deposit: May 20, 2004
I hereby certify under 37 CFR 1.8(a) that this correspondence is being deposited with the United States Postal Service as **first class mail** with sufficient postage on the date indicated above and is addressed to the Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.

Jennifer Juarez

Accordingly, there is no motivation in either reference to combine them in order to obtain the method of claim 1. While the Examiner asserts that Narurkar expressly suggests use of Outlook (Answer, p. 4), all that Narurkar states is that Outlook can be one of a number of application programs that use different data formats. Nowhere however, does Narurkar teach or suggest the desirability of displaying transferred time sensitive data at a predetermined time. Accordingly, without such a motivation, the proposed combination fails and claim 1 is patentable.

With regard to claim 2, similarly there is no motivation to combine the additional reference (Kanevsky) with Narurkar and Padwick. In this regard, Kanevsky is directed to an emergency server backup system. However, there is no motivation to combine these three disparate references, one directed to transferring information files of disparate configurations; one directed to an email program; and one directed to an emergency backup system to: cause time sensitive data to be transferred to a second system when a first system is being powered off, and then to display the time sensitive data at a predetermined time on a display coupled to the second system. Accordingly, the rejection of claim 2 should be reversed.

II. CONCLUSION

For the reasons set forth herein, as well as set forth in the Appeal Brief, Applicant respectfully requests that each of the final rejections be reversed and that the claims subject to this Appeal be allowed to issue.

Respectfully submitted,

Date: May 20, 2004
